

Near-net Shaped Cut Parts

Another value-added service that our Service Centers provide is the ability to produce highly-customizable or complex shapes with our near-net shaped cut parts. These parts can also be produced in small batch sizes so you can get exactly what you need.

Other benefits include:

- The ability to produce parts which are much closer to the required finished size, shape, and tolerance.
- Maximization of utilized material in the finished part versus wastage in comparison to machining processes.
- A greater uniformity from part to part and an overall improvement in quality.
- Reduction of the total number of manufacturing stages.
- Reduction of time for manufacturing, with manufacturing times often being more than halved.
- An overall energy saving possible throughout your entire manufacturing process.
- Reduction of cost of manufacturing, resulting from a combination of the above factors.
